Executive Summary:

This report represents the findings of a recent investigation surrounding the murder of one Michael Woodard. This report, having been requested by the Vermont State Police, documents the data of one Jenna Woodards, wife of the deceased, computer. During the State Police's investigation it was deduced that the victim was likely poisoned. As a result, this document is meant to thoroughly explain both the why and how of the murder of Michael Woodard.

During the Investigation multiple chrome web searches could be found referencing different forms of poison. This along with the multiple searches relating to “How to get Revenge on Cheating husband” shows both motive and opportunity. Following the parsing of Chrome history it was deduced that Jenna Woodard had both researched and attempted to purchase a poisonous plant known as “Lily of The Valley”. The attempted purchase was done in an isolated browser; likely to reduce the chances of this specific purchase being located.

A receipt for a purchase, which totalled \$27.72, from Lowes was found on the system. This was encoded using base 84 in order to hide the file. Following the decoding of this receipt it was found that an item in the suspects lowes online shopping cart was no longer being sold online which explains the cash purchase. The major point to note is that the item was a “Lowe’s white lily of the valley plant in 1 - Quart Pot”. The only question left would be how Jenna Woodard poisoned Michael Woodard. It was concluded that it was likely cooked into a dish given the fact that even when cooked the poison in Lily of the Valley plants do not lose their potency and would still be deadly upon consumption.

Tools Used:

Table 1: Tools Used

Tool Name	Tool Author	Tool Version	Purpose
FTK imager	Exterro	4.7.3.82	Used to locate the basic information and double check contents
Autopsy	Basis technology	4.22	Used to locate Partition information and search history.
Bulk Extractor	Simson Garfinkel Jessica Bradley	1.6.0-dev-rec 03	Used to scan an image without parsing the file system.

CyberChef.org	GCHQ	N/A	Used for decoding, decryption and data analysis.

Evidence:

Evidence Acquisition:

The evidence acquired for analysis was acquired from one Amy Keigwin. The evidence used being a copy of the original E01 file taken from the suspects system. This device had a total size of 53,678MB split unevenly between four separate partitions. The partition which is of note for this investigation being the NTFS partition which has a total size of 52,988.951552MB. All of this information was acquired by checking the System information of the specified E01 file.

In order to maintain the Integrity of the evidence involved the E01's SHA1 and MD5 hash was noted. Both codes related to the contents of the file itself; should the data of the E01 image be changed at any point during investigation then both hashes would no longer match the noted hashes.

Table 2: Evidence Hashes

Hashing Algorithm	Hash
MD5	4a900b7c47275025a4fbfaf40a51b70d
SHA1	1772c5cb34364a0e626069bb79b3ab672fb61b22

Master Evidence Table:

Below is the Master Evidence Table. This table helps explain the items, which are considered suspicious, associated with the investigation. For the purposes of this document, the file names will be labeled in the evidence item section followed by its source location and a brief description of the contents. All of the evidence items will be discussed further in the finding section.

Table 3: Master Evidence Table:

Evidence Item	Evidence Source	Description
9117.jpeg	\users\Jenna Woodard\Pictures\Our Wedding June 2023\	A happy wedding photo of Mr and Ms Woodard.
9119.jpeg	\users\Jenna Woodard\Pictures\Our Wedding June 2023	A happy wedding photo of Mr and Ms Woodard.
9124.jpeg	\users\Jenna Woodard\Pictures\Our Wedding June 2023	A happy wedding photo of Mr and Ms Woodard.
decode.txt	\users\Jenna Woodard\Pictures\Saved Pictures\Evidence	A Lowes receipt which had been encoded with Base84
IMG_3753.heic	\users\Jenna Woodard\Pictures\Saved Pictures\Evidence	An image, taken with an iphone, of Mr Woodard and a female.
IMG_6485.heic	\users\Jenna Woodard\Pictures\Saved Pictures\Evidence	An image, taken with an iphone, of Mr Woodard and a female.
IMG_8322.heic	\users\Jenna Woodard\Pictures\Saved Pictures\Evidence	An image, taken with an iphone, of Mr Woodard and a female.
IMG_8335.heic	\users\Jenna Woodard\Pictures\Saved Pictures\Evidence	An image, taken with an iphone, of Mr Woodard and a female.
Chrome History	\Users\Jenna Woodard\AppData\Local\Google\Chrome\User Data\Default\History	Multiple instances of suspicious search traffic from this source will be discussed following this.
<u>Firefox Web Visits</u>	\Users\Jenna Woodard\AppData\Roaming\Mozilla\Firefox\Profiles\71g61ipr.default-releases\places.sqlite	This is the database file used by firefox in order to hold web history. This is inbuilt into the web browser.

Findings:

To begin, a wordlist was created with common household items which could be used to kill someone. This wordlist was then parsed and checked against the information located in both the google chrome and firefox browser history respectively. This was done to find both a potential motive and the likely method for the murder of one Michael Woodard. Below is a table of all of the major suspicious searches located on the suspects device:

Table 4: Suspicious Search History

Browser	Search	Date and Time of Searches
---------	--------	---------------------------

Chrome	why does my husband have recent pics with his ex	3/6/2025 – 3:34:52 <-> 3:38:00
Chrome	revenge on cheating husnad	3/6/2025 – 3:38:23 PM <-> 3:48:02 PM
Chrome	how to make cheating husband suffer	3/6/2025 – 3:39:36 PM <-> 3:48:48 PM
firefox	poisonous winter plants	3/7/2025 – 5:34:24 PM [This is when she located her poison]
firefox	Lily of the valley poison effects	3/7/2025 – 5:31:28 PM
firefox	lily of the valley buy pawlet vt in-store	3/7/2025 – 5:37:13 PM

Table 5 shows potential motivation and means for the murder of one Michael Woodard. The motive being the potential that Mr Woodard had been cheating on his wife with an Ex. This leads us to the question of what Mr Woodard was wanting to learn and see which can further be discussed through the use of Table 6 which shows most of the relevant links which were accessed.

Table 5: Chrome Web Visits

From the information seen in the previous tables; it can be deduced that Ms Woodard believes her husband has been cheating on her. As such she began researching potential poisonous plants and came across the plant “lily of the valley”. From there she researched potential locations in which she could buy said plant before choosing Lowes as her distributor. The next step for this process was to locate what evidence, that could be found on the system, made Ms Woodard believe her husband was cheating on her. As such the file system for her user account was checked for images which could relate to proof of infidelity.

Two sets of images were found during this investigation. The first set, Figures 1 through 3, featured Jenna and Michael Woodard during their wedding from 2023. The second set of images, being suggestive images of one Michael Woodard with an undisclosed female, was found in an image folder labeled “evidence” which had been created by the “Jenna Woodard” account. Below is the content and a description of said figures content.

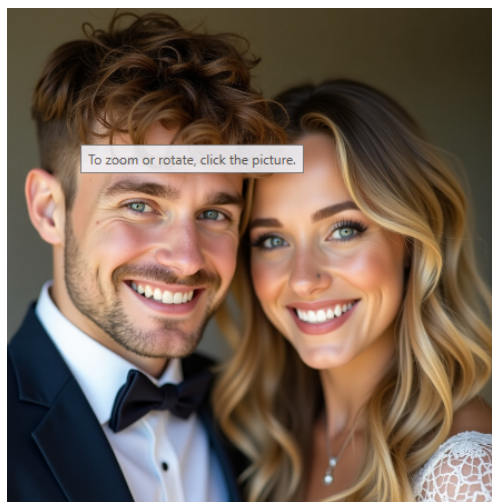

Figure 1: Jenna & Michael Woodard Wedding #1 – 9117.jpeg

Figure 1, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Our Wedding June 2023\”. This Portrait shows the suspect Jenna Woodard and the victim Michael

Woodard; both adorned in wedding attire. This image implies their relation status and provides reference for Identifying Michael Woodard in the later evidence.

Figure 2: Jenna & Michael Woodard Wedding #2 – 9119.jpeg

Figure 2, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Our Wedding June 2023\”. This image shows a picture of the couple in a casual outdoor setting with different lighting and positioning. This image provides additional context of Michael Woodards appearance for later comparison.

Figure 3: Jenna & Michael Woodard Wedding #3 – 9124.jpeg

Figure 3, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Our Wedding June 2023\”. This image shows a picture of the suspect Jenna Woodard with the deceased. The consistent appearance of Michael Woodard between the wedding photos provides reliable identification references for one Michael Woodard (Fig1)(Fig2)(Fig3).

Figure 4: Michael Woodard and his Ex #1 – IMG_3753.heic

Figure 4, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Saved Pictures\Evidence\”. This image shows a picture of the deceased in flagrante with an unnamed woman. Their faces; compromisingly close. This photo, having been downloaded on March 5th, is the first in a series of compromising photos saved to a ‘evidence folder’ created by Jenna Woodard on March 17th

Figure 5: Michael Woodard and his Ex #2 – IMG_6485.heic

Figure 5, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Saved Pictures\Evidence\”. This image shows one, Michael Woodard, with the same unidentified woman seen in Figure 4. The metadata for the image indicates that the photo was downloaded on March 5th; this corresponds with some of the suspicious searches occurring on 3/6/2025

Figure 6: Michael Woodard and his Ex #3 – IMG_8322.heic

Figure 6, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Saved Pictures\Evidence\”. This image appears to depict Michael Woodard and the unknown Brunette women in a romantic position. This image confirms consistency in both individuals' appearances while also reinforcing the pattern of intimacy apparent between figures (Fig4)(Fig5)(Fig6).

Figure 7: Michael Woodard and his Ex #4 – IMG_8335.heic

Figure 7, located in partition 3 in the folder location “\users\Jenna Woodard\Pictures\Saved Pictures\Evidence\”. The final compromising image of Michael Woodard with the unknown female. This image completes the set of evidence located by Jenna Woodard which appears to have motivated the murder of Michael Woodard. The collection of these images in a file labeled “evidence” signifying premeditation and motive.

Along with the images, taken with an iphone, located in the evidence folder was a .txt file labeled decode.txt. This was suspicious as it was encoded making it more difficult to understand the contents of. As such various methods of decoding were used until eventually it was confirmed that it had been encoded with base 84. The following output was discovered upon decoding the document.

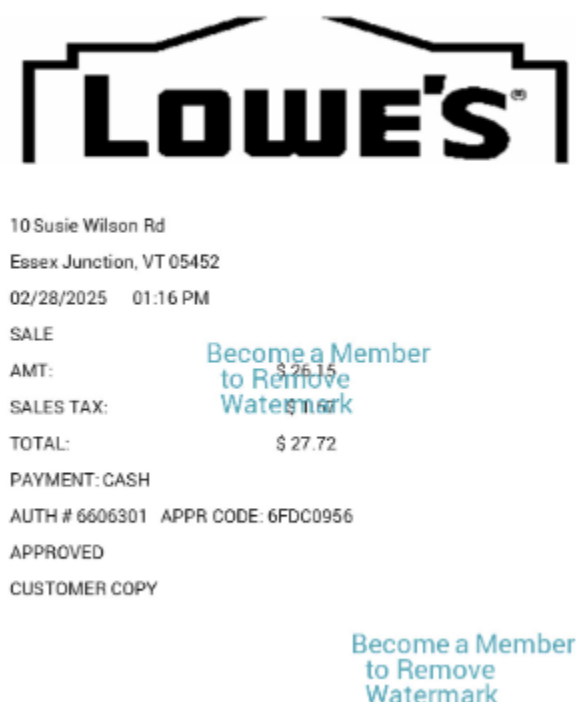

Figure 8: Encoded Lowes Receipt – decode.txt

Along with the images, taken with an iphone, located in the evidence folder was a .txt file labeled decode.txt. This was suspicious as it was encoded making it more difficult to understand the contents of. As such various methods of de-encoding were used until eventually it was confirmed that it had been encoded with base 84. The following output was discovered upon de-encoding the document. A cash purchase of an item totalling \$27.72 after tax from the Essex Junction Lowes is noted on the receipt. The item itself being the Lowe's "White Lily of the Valley plant in 1 - Quart Pot" which is no longer sold online. This helps to explain why it was purchased with cash. This item was also found to have originally been in her Lowe's Cartpreview in an isolated browser. The isolated browser having been located in bulk extractor, a digital forensics tool which was used to scan the E01 file into concurrent processes before extracting values from the files available.

Timeline:

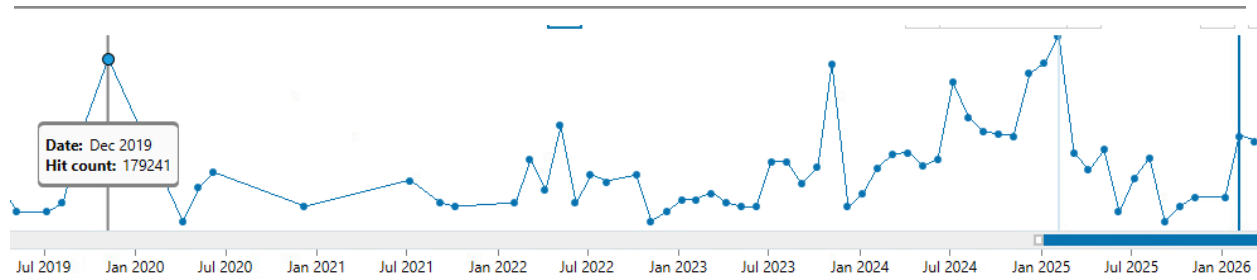

Figure 9: A timeline graph showing system changes

Figure 10: A timeline of suspicious artifacts and their specific type. Color coordinated and dated.
(Fig. 10):

As seen in figures 1, 2, & 3; Jenna Woodard is a blond caucasian female with shoulder length hair. Her husband, the deceased, is a brunette caucasian male who appears to be in his early thirties. The logical flow of figure 10 goes as follows. One Jenna Woodard locates four separate images of her husband in flagrante with an unknown female. These images are figures 4,5,6, & 7 respectively. The female being a brunette caucasian female with neck length hair. At one point the unknown woman must have been introduced to Jenna as the Ex of her husband Michael. This likely occurred prior to the marriage itself as early as 2020.

The day following the discovery of the images; Jenna woodard began searching potential reasons as to why Michael may have had recent pictures of him and his Ex which have been taken. This ultimately led her to looking for methods of revenge; as shown in the search history on March 7th. During her search she ran across the plant known as “Lily of the Valley” a poisonous plant which does not lose potency upon being baked or cooked. This means that the seeds of the plant could be put into baked goods for ease of consumption.

On the seventeenth of March, Jenna created a folder labeled evidence for the likely purpose of confronting her husband. This led to a fight which ultimately led Jenna to commit the murder

Conclusion:

Based on the analysis which has been conducted on Jenna Woodard’s personal device, there is evidence to support the theory that she poisoned her husband, Michael Woodard, after finding evidence of his infidelity. The investigation has provided a clear progression from the discovery of the affair to the discovery of the method.

As shown in Figure 10; Jenna Woodard first found multiple images of her husband in flagrante with another woman on March 5th, 2025. Her reaction after a night's rest, documented through her browser history on the device, shows an immediate conclusion of infidelity. Searches like “Why does my husband have recent pics with his ex” and “Revenge on cheating husband” (Table 4/5).

By March 7th, Jenna’s searches began to focus less on her husband's infidelity and more on methods of poisoning. Multiple forms of poison research were located on her system however

the most prominent one she began to research was that of the “Lily of the Valley”. Following research on “Lily of the Valley” poisoning, she then continued to search for local stores and shops which sold the plant in Pawlet Vermont.

The encoded receipt (Figure 8) provides evidence of her attempt to purchase a Lily of the valley on March 28th. She attempted to conceal the purchase as it was done through cash. The encoding of the receipt shows a further premeditation for the murder itself.

The creation of the Evidence folder suggests a premeditation for a potential confrontation with Michael Woodard which would have occurred between the dates of March 17th to March 28th. This confrontation likely being the final trigger for Jenna Woodard.

Evidence from the system provides a look into Jenna Woodards Digital Footprint and a motive and method for murder. With strong ties back to “Lily of the Valley”, and the notes of a cheating spouse, it is highly likely that Jenna Woodard poisoned Michael for his infidelity. The search evidence also further shows a potential for future threat against the unnamed Ex.

All evidence has been collected with state of the art digital forensics tools. All data collected is in accordance with standard digital forensics practices. Should any questions arise they can be directed to Forensic Incorporated.
